DEVELOP THE PYTHON SCRIPT

Date:	10 November 2022
Team Id:	PNT2022TMID30274
Project Name:	Gas leakage Monitoring & Alerting System for Industries

We are getting oxygen, Toxic Gas level, Temperature and Humidity of environment of workers as input through the beacon scanner (python code)

Python Script:

```python
import wiotp.sdk.device
import time
import random
myConfig = {
    "identity": {
        "orgId": "b31tni",
        "typeId": "print1",
        "deviceId":"printid"
    },
    "auth": {
        "token": "z?7tcRfcekcO08R6f2"
    }
}
```

```python
def myCommandCallback(cmd):
    print("Message received from IBM IoT Platform: %s" %
cmd.data['command'])
    m=cmd.data['command']

client = wiotp.sdk.device.DeviceClient(config=myConfig, logHandlers=None)
client.connect()

while True:
    o2=random.randint(25,100)
    def my_function():
        othergas=random.randint(2,100)
        time.sleep(15)
        return othergas
    othergas=my_function()
    temp=random.randint(0,100)
    humidity=random.randint(0,100)
    limit=50
    if(othergas >= limit):
        myData = { 'Alert': "Alert the gas is leaked",'othergas':othergas}
    else:
        myData={'oxygen':o2, 'othergas':othergas,
'temperture':temp,'humidity':humidity}
    client.publishEvent(eventId="Gas Sensor", msgFormat="json",
data=myData, qos=0, onPublish=None)
    print("Published data Successfully: %s", myData)
```

```python
    client.commandCallback = myCommandCallback
    time.sleep(15)
client.disconnect()
```
